“HPC plc...committed to  
engineering excellence”

One Company - two businesses, dedicated to providing technically advanced solutions for the most challenging engineering demands.

Trusted to deliver excellence, and always looking to extend this reputation, HPC combines a 50 year heritage with a belief in the future of British manufacturing.

# HPC

**“One Company - two high-performance engineering businesses”**

HPC Precision Engineering and HPC Compressed Air Systems, two of the most respected names in British manufacturing. Both sharing a reputation as complete design and engineering service providers to world-renowned manufacturing customers.

**“A unique combination of the best engineers and continual investment in technology, capability and infrastructure”**

The experienced skills and passion of HPC's people has been literally handed down through generations. This skill and passion becomes a formidable force when harnessed to a commitment to invest in the latest advanced technologies.

**“World-class integrated project management, quality and manufacturing functions”**

Operational excellence is achieved through continuous improvement in all areas. HPC is proud of its best-in-class reputation in each of its chosen engineering specialisms - outsourced precision production, and the design of the most efficient and reliable compressed air systems.

**“Our quality culture defines every level of our organisation”**

HPC's quality management system provides a set of processes which ensure consistency and improvement in working practices, which, in turn, enhance the performance and reliability of our products and services.

# HPC | Precision Engineering

Customers from all sectors of industry with ultra high precision machining requirements look to HPC to turn a design concept into a cost effective, full volume production reality.

“Our customers trust us with their most critical production challenges”

Where decades ago precision engineers were required to hold tolerances to thousandths of an inch, HPC's blue-chip customers now require microns. Maintaining these tolerances in volume production, while guaranteeing quality, delivery and cost effectiveness, can only be achieved by highly skilled engineers working within a total quality environment with the latest in machine-tool technologies.

“We do not describe ourselves as a machinist, or as a sub-contractor, as these fail to reflect our unique ability to undertake the total management of our customers' most complex projects”

HPC's project management begins at the design concept and encompasses every stage from the selection and management of the most appropriate foundry source, through treatments and assembly, to the ultimate supply of quality assured, value-for-money components to a production line anywhere in the world.

# HPC | Compressed Air Systems

Compressed Air - the fourth utility - a clean, reliable source of power which is critical to the production processes of all manufacturing businesses. A leader in the UK market for 50 years, HPC's 'yellow-box' compressed air systems can be found throughout British industry, from workshops and garages to factories and power stations.

# CSD

**"In partnership with Kaeser Kompressoren GmbH we provide our customers with the most reliable and efficient Compressed Air Systems"**

The partnership with Kaeser of Germany is at the heart of HPC's business. HPC Precision Engineering is trusted to supply Kaeser with high precision air-end components and for 30 years, HPC has supplied Kaeser compressors to the UK's most respected manufacturing companies.

**"The spirit of the Kaeser partnership continues with our authorised distributors and in all our customer relationships"**

The unrivalled knowledge and professionalism of HPC's distributors provide installation and aftermarket services which enhance the performance and reliability of HPC's Compressed Air Systems.
